THE PATH OF WATER

SANINDUSA

100%

PORTUGUESE ROOTS

For more than 30 years, Sanindusa has been recognized for its high-quality bathroom and kitchen products. From early on, the main focus has been on innovation and customer orientation, through the transparency and precision encompassed in all our projects.

Sanindusa's group consists of 5 production units and has 100% Portuguese roots. Our company aims to take its brand image and soul to the four corners of the world. Bold and innovative design is the common denominator of our creations, combined with ecological concerns that are reflected in our range of products. The constant investment in technology has allowed our company to achieve a pioneering position which provides investment return and ensures the present and future continuity of the group since 1993.

SINCE  1990

UNE ENTREPRISE 100% PORTUGAISE

Depuis plus de 30 ans, Sanindusa est reconnue par ses produits de salle de bain et de cuisine de haute qualité. Notre priorité a été l'innovation et la satisfaction de nos clients, fondées sur la transparence et la précision de chacun de nos projets.

Le groupe Sanindusa compte cinq unités de production et est fier d'être 100 % portugais. Notre mission est de partager l'identité et les valeurs de notre marque à travers le monde. Un design audacieux et innovant est la signature de nos créations, accompagné d'un engagement fort en matière de responsabilité écologique.

Grâce à un investissement constant dans la technologie, nous avons su occuper une position pionnière dans notre secteur, garantissant un retour sur investissement solide et assurant la croissance durable du groupe depuis 1993.

SANINDUSA WORLD CUP 2030 COLLECTION

The 2030 World Cup is more than football. It is unity, passion, and celebration. Inspired by this universal spirit, **Sanindusa presents an exclusive collection of taps and accessories that transforms water into a symbol of connection between cultures, places, and stories.** The pieces are conceived in a perfect symbiosis of colours, materials and shapes which allow a fluid interpretation of the elements and elevates the user experience. By following our core elements the company has achieved ongoing brand recognition, awards and return.

Each range carries a name inspired by the world's geography – rivers that flow and cities that breathe: **Luso, Toledo, Casablanca, Pilar, Montevideo, Málaga, Ebro, Prata, Apa, Anfa, Caia, Agadir, Kopa Plus, Aveiro, Buenos Aires and Luxe.** These names evoke movement, identity, and authenticity, reflecting both the essence of water and the character of each piece.

More than products, these are creations that celebrate the energy of sport and the beauty of diversity, turning every tap into a tribute to life and the future.

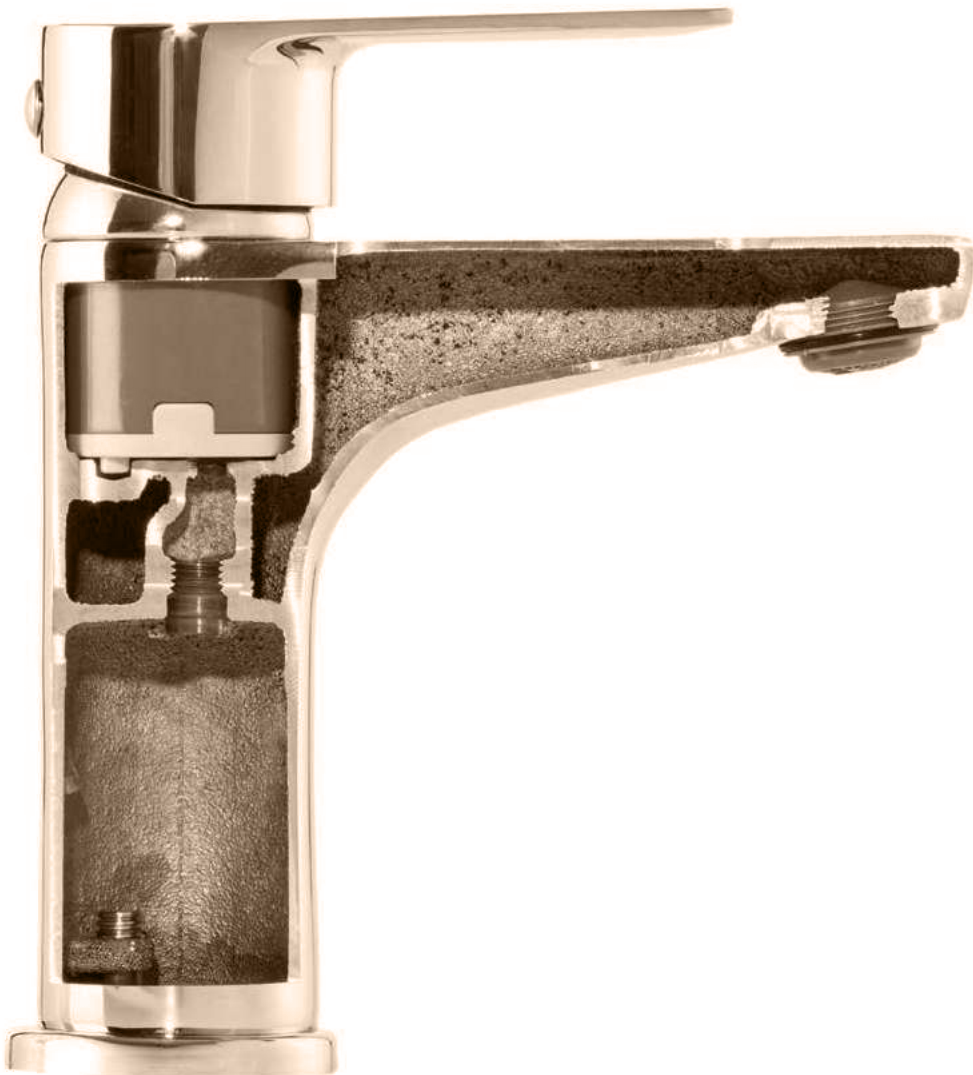

SANINDUSA COLLECTION COUPE DU MONDE 2030

La Coupe du Monde 2030 est plus que du football. C'est l'unité, la passion et la célébration. Inspirée par cet esprit universel, Sanindusa présente une collection exclusive de robinets et d'accessoires qui transforme l'eau en symbole de rencontre entre cultures, lieux et histoires.

Chaque gamme porte un nom inspiré de la géographie mondiale – des rivières qui coulent et des villes qui vivent : **Luso, Toledo, Casablanca, Pilar, Montevideo, Málaga, Ebro, Prata, Apa, Anfa, Caia, Agadir, Kopa Plus, Aveiro, Buenos Aires and Luxe.** Ces noms évoquent le mouvement, l'identité et l'authenticité, reflétant à la fois l'essence de l'eau et le caractère de chaque pièce.

Plus que de simples produits, ce sont des créations qui célèbrent l'énergie du sport et la beauté de la diversité, transformant chaque robinet en un hommage à la vie et à l'avenir.

PVD (Physical Vapor Deposition) is a highly adherent fine ceramic coating, produced using a highly ionised plasma depositing process in a vacuum chamber, where the temperatures can vary between 60° and 500 °C.

The high temperatures enable coatings with a high degree of purity to be obtained, which are chemically inert and biocompatible.

With pvd technology, our taps are more resistant to scratches than chrome and have a significantly harder surface. This technology allows for maximum durability and resistance.

SANINDUSA PVD

Le **PVD (Physical Vapor Deposition)** est un revêtement céramique fin très adhérent, produit par un processus de dépôt de plasma hautement ionisé dans une chambre à vide, où les températures peuvent varier entre 60° et 500 °C.

Les températures élevées permettent d'obtenir des revêtements d'une grande pureté, chimiquement inertes et biocompatibles.

Grâce à la technologie pvd, nos robinets sont plus résistants aux rayures que le chrome et présentent une surface nettement plus dure. Cette technologie permet d'obtenir une durabilité et une résistance maximales.
