O anel desodorizante proporciona um aroma agradável e o diafragma selante previne a emissão de odores do esgoto.

The deodorant ring provides a pleasant smell and the sealing diaphragm prevents the release of sewer odours.

La bague de déodorant et offre un arôme gréable et la membrane d'étanchéité empêche l'émission d'odeurs de l'égout.

Diafragma sellador

Ao passar pela válvula, o fluido provoca a abertura instantânea do diafragma que o conduz sem descarga de água para a canalização. O diafragma fecha por vácuo quando o líquido deixa de circular, impedindo o refluxo.

When the fluid passes the valve it instantly opens the vertical diaphragm flowing without water discharge to the sewage system. When the flow stops the sealing diaphragm closes itself to avoid reflux.

Lors du passage de la vanne, le fluide provoque l'ouverture instantanée de la membrane, menée sans écoulement de l'eau au système des eaux usées. Le diaphragme de vide se ferme lorsque le liquide cesse de couler et d'éviter les reflux.

Al pasar la válvula, el fluido causa la apertura instantánea del diafragma, siendo conducido sin descarga de agua al sistema de alcantarillado. El diafragma de vacío se cierra cuando el fluido deja de fluir para evitar el reflujo.

As misturadoras termostáticas têm a capacidade de manter a água à temperatura desejada. Foram pensadas para possibilitar um banho relaxante sem preocupação com oscilações térmicas, mesmo quando outra torneira é aberta. Equipadas com o sistema antiescaldão impedem queimaduras cutâneas em caso de contacto com as superfícies metálicas. Estas são as torneiras mais seguras para crianças.

Thermostatic mixers hold water at a preset temperature. They are designed to function without temperature fluctuations, even when another tap is running. They're equipped with an anti-scalding system which prevents skin burns in case of contact with the taps metal surfaces. These are the safest taps for children.

Les mitigeurs thermostatiques ont la capacité de maintenir l'eau à la température souhaitée. Ils sont conçus pour permettre un bain relaxant sans se soucier des fluctuations de température, même lorsqu'un autre robinet est ouvert. Équipés du système anti-brûlure, ils préviennent les brûlures de la peau en cas de contact avec des surfaces métalliques. Ce sont les robinets les plus sûrs pour les enfants.

As misturadoras com o sistema **Ecospot** são equipadas com um cartucho que regula o caudal através de uma abertura faseada do manípulo. Esta tecnologia permite abrir em duas posições: meia abertura e abertura total, garantido deste modo, uma redução significativa no consumo de água e de energia.

Mixers with **Ecospot** system are equipped with a cartridge that regulates the flow through a phased opening of the lever handle. This technology allows a two position opening: half open and fully open. This system guarantees a significant reduction in water and energy consumption.

Les mitigeurs dotés du système **Ecospot** sont équipés d'une cartouche qui régule le débit par une ouverture progressive du levier. Cette technologie permet une ouverture dans deux positions : une ouverture à moitié et une ouverture totale, assurant ainsi une réduction significative de la consommation d'eau et d'énergie.

No seguimento da sua política de proteção e defesa do meio ambiente a Sanindusa tem vindo a desenvolver campanhas de incentivo a comportamentos ecológicos e, ao mesmo tempo, apostado no desenvolvimento de produtos que reduzam os consumos de água e energia ao máximo. Como resultado deste investimento a empresa apresentou as séries Master 40, Tube Eco, Ícone Eco, Sigma, Alfa, Square e Área, equipadas com um regulador de caudal que possibilita uma economia até 50% no consumo de água e gera uma redução de energia necessária ao aquecimento da água. Este dispositivo reduz também as variações de pressão na rede quando várias torneiras estão abertas em simultâneo.

Following their environment protection policy Sanindusa has been developing campaigns to encourage environmentally friendly behaviors like developing products that reduce water and energy consumption to the maximum. As a result of this investment the company presented the Master 40, Tube Eco, Ícone Eco, Sigma, Alfa, Square and Área collections which are equipped with a flow regulator that allows up to 50% water savings and reduces the energy needed for water heating. This device also reduces the pressure variations in the network when multiple taps are open at the same time.

Suite à sa politique de protection et de défense de l'environnement, Sanindusa a développé des campagnes pour encourager les comportements écologiques et, en même temps, a investi dans le développement de produits qui réduisent les consommations en eau et en énergie au maximum. En conséquence de cet investissement, nous présentons les séries Master 40, Tube Eco, Ícone Eco, Sigma, Alfa, Square et Área, équipées d'un régulateur de débit qui permet d'économiser jusqu'à 50% de la consommation en eau et de réduire l'énergie nécessaire pour chauffer l'eau. COLDOPEN

O sistema de abertura **Cold Open** é um dispositivo que permite a poupança de recursos hídricos e energéticos. A abertura do manípulo para a direita está bloqueada, pelo que quando se procede à abertura da misturadora sairá água fria (quando alinhado pela bica), não colocando em funcionamento o esquentador ou acumulador, havendo por isso, economia energética. Ao girar o manípulo para a esquerda para obter mistura, obtém-se gradualmente água quente. Em misturadoras equipadas com cartuchos **Cold Open** a abertura da água pode fazer-se em qualquer ponto de rotação do manípulo, contrariamente aos sistemas progressivos em que a abertura se inicia obrigatoriamente na água fria passando progressivamente, com a rotação do manípulo, para água temperada e depois quente.

Cold Open is a water and energy saving system for taps. The opening of the knob to the right is blocked which means that when the mixer tap is open it will only release cold water. When aligned at the spout the water heater or accumulator will not be activated saving energy resources. When the knob is turned to the left hot water will gradually be produced. Mixer taps equipped with Cold Open cartridges can be opened at any point of the rotation of the knob contrary to the systems in which the opening starts necessarily in cold water, progressively changing to warm and then hot water.

Le système d'ouverture **Cold Open** est un dispositif qui permet d'économiser les ressources hydriques et énergétiques. L'ouverture du levier vers la droite est bloquée, aussi, quand le mitigeur est ouvert, il en sort de l'eau froide (quand alignée avec le bec), ce qui ne met pas en marche le chauffe-eau ou l'accumulateur, et génère donc une économie d'énergie. En tournant le levier vers la gauche pour actionner le mitigeur, il en sort progressivement de l'eau chaude. Sur les mitigeurs équipés de cartouches **Cold Open** l'ouverture de l'eau peut se faire en tout point de rotation du levier, contrairement aux systèmes progressifs où l'ouverture commence obligatoirement avec l'eau froide en passant progressivement à l'eau tiède puis chaude, en tournant le levier.

El sistema **Cold Open** es un dispositivo que permite ahorrar recursos de agua y energía. La apertura del pomo de la derecha está bloqueada, de modo que cuando el grifo mezclador esté abierto, sólo liberará agua fría (cuando esté alineado en el caño), por lo que el calentador de agua o el acumulador no se activará, lo que permitirá ahorrar energía. Cuando se gira el pomo hacia la izquierda para obtener agua mezclada, se producirá gradualmente agua caliente. Los grifos mezcladores equipados con cartuchos **Cold Open** pueden abrirse en cualquier punto de rotación del mando, al contrario de los sistemas progresivos en los que la apertura comienza necesariamente en agua fría, cambiando progresivamente a agua templada y luego a agua caliente cuando el mando se convierte.

Timed taps can be operated by pressing down on their pushbutton, this will start the water flow and after a few seconds the tap will switch off automatically.

These taps have several advantages. They are extremely practical, easy to use, reduce water consumption and the pre-set flow rate can be adjusted.

Les robinets temporisés sont actionnés par une pression manuelle sur le bouton-poussoir qui s'éteint automatiquement après quelques secondes. Ils présentent de nombreux avantages, le plus important étant les économies d'eau significatives. Le débit pré-réglé en usine est réglable en fonction des besoins et, quel que soit l'endroit où ils sont appliqués, ils sont extrêmement pratiques et faciles à utiliser.

As torneiras eletrônicas com sensores garantem uma boa gestão água, já que minimizam o seu desperdício. Para além da poupança de água, satisfazem as mais elevadas exigências de higiene e conforto do utilizador.

O acionamento é feito sem contacto direto com a torneira, evitando a proliferação de microrganismos nocivos e contribuindo para a máxima higiene da casa de banho.

Existe uma variedade de soluções sendo possível escolher entre um sistema de alimentação a pilhas ou a transformador.

Como funciona?

O sensor deteta a presença de um utilizador em frente à torneira e envia o sinal para a válvula solenoide que inicia a saída de água. Na sua ausência a unidade eletrónica interrompe o fluxo.

Sensored electronic taps ensure good water management as they minimize waste. In addition to saving water they also meet the highest demands in terms of hygiene and user comfort.

They operate without direct human contact with the tap which avoids the proliferation of harmful micro-organisms and contributes to the cleanliness of the bathroom.

There are a variety of solutions. It is possible to choose between a battery powered system or mains electric via transformer.

How do they work?

The sensor-eye detects the user's hands and sends a signal to the solenoid valve which starts the water flow. The tap automatically stops when the user's hands are no longer detected.

Des robinets électroniques équipés de capteurs assurent une bonne gestion de l'eau, car ils minimisent le gaspillage. En plus d'économiser l'eau, ils répondent aux exigences les plus élevées en matière d'hygiène et de confort des utilisateurs.

Ils fonctionnent sans contact direct avec le robinet, ce qui empêche la prolifération de micro-organismes nocifs et contribue à une hygiène maximale dans la salle de bains.

Il existe plusieurs solutions et il est possible de choisir entre un système d'alimentation par batterie ou par transformateur.

Comment cela fonctionne-t-il ?

Le capteur détecte les mains de l'utilisateur devant le robinet et envoie un signal à l'électrovanne qui déclenche la sortie de l'eau. Le robinet s'arrête automatiquement lorsqu'il ne détecte plus les mains de l'utilisateur.

Los grifos electrónicos con sensores aseguran una buena gestión del agua, ya que minimizan los desperdicios. Además de ahorrar agua, cumplen con las más altas exigencias en cuanto a higiene y comodidad del usuario.

Funcionan sin contacto directo con el grifo, evitando la proliferación de microorganismos nocivos y contribuyendo a la máxima higiene del baño. Hay una variedad de soluciones y es posible elegir entre un sistema de alimentación por batería o transformador.

¿Cómo funciona?

El sensor detecta las manos del usuario frente al grifo y envía una señal a la válvula solenoide que abre la salida de agua. El grifo detiene automáticamente el flujo cuando ya no detecta las manos del usuario.
